How did the Fund perform last year?

UltraShort Mid-Cap ProFund (the "Fund") seeks daily investment results, before fees and expenses, that correspond to two times the inverse (-2x) of the daily performance of the S&P MidCap 400[®] Index (the "Index"). The Fund invests in financial instruments that ProFund Advisors believes, in combination, should produce daily returns consistent with the Fund's investment objective. For the year ended July 31, 2024, the Fund had an average daily statistical correlation of 0.99 to twice the inverse of the daily performance of the Index. For the same period, the Index had a total return of 15.41% and a volatility of 15.73%. The index performance was driven by the strong equity environment, with an underweight in technology offset by strong industrials performance relative to the S&P 500[®]. Primary factors affecting Fund performance include the total return of the derivatives held by the Fund, the performance of the reference assets to which the derivatives are linked, financing rates paid or earned, the types of derivative contracts used (and their correlation to the Index), expenses, transaction costs, the volatility of the Fund's Index, the impact of compounding, and other miscellaneous factors.

Cumulative performance: August 1, 2014 through July 31, 2024
